Waste Pick-Up Check List

In order to simplify the waste pick-up process, Chemtron encourages their customers to use the following checklist in preparing a shipment of waste material prior to the arrival of Chemtron's vehicles. Chemtron thanks you in advance for your cooperation.

For Drum Shipments:

- Place lids and bungs on all containers.
- Tighten lids and bungs on all containers.
- Assure the outside of the containers are clean with no waste on the outside top or sides of the drum.
- Assure drums are in good shippable condition. Please inform the Chemtron Scheduling Department if an overpack is needed.
- Assure hazardous waste (or non-hazardous waste) label is placed on the upper 1/3 side of each container.
- Place DOT approved label next to the hazardous waste label on each drum as required.
- Place all containers in a readily accessible area to allow for ease in loading.
- Please alert Chemtron customer service with any special instructions for waste pick-up.
- Alert Chemtron customer service at the time of order if you require extra labels, empty drums, etc.
- Be sure your load is ready in advance of the truck arrival. Includes, PPW, labels, etc.
- Use your custom pick-up request for convenience in order entry (contact your Chemtron rep for more information).
